

# LITE-STRIPS

## WATER STORAGE CLOSE TO THE ROOTS

LITE-**STRIPS** are water accumulating strips that can be easily mixed into the soil. The water storage is thus directly in proximity to the roots and e.g. not at the bottom of the plant pot. Therefore the plants have an effortless access to the stored water.

10 l LITE-**STRIPS** store up to 9 l water.

+ UP TO 50% LONGER WATERING INTERVALS

+ LESS WATER CONSUMPTION

+ OPTIMAL WATER SUPPLY FOR YOUR PLANTS

+ BETTER PLANT GROWTH

+ LOOSENS AND AERATES THE SOIL

+ GROWTH AID AND ROOT GUIDANCE FOR

LAWN TURF

### Athletic fields, lawns, slopes & green roofs

Mix approx. 2 l LITE-**STRIPS** per m<sup>2</sup> into the approx. 5 - 20 cm deep layer of soil.

### Lawn turf

Mix approx. 1 l per m<sup>2</sup> of the scattered LITE-**STRIPS Bio1** into the top approx. 5 - 10 cm thick layer of soil. Roll out the lawn turf, water, and done!

### Raised planting beds & plant pots

Mix approx. 5-10% of the volume into the soil.

### Trees & bushes

Mix about 10-20 l per pit into the soil surrounding the root ball. LITE-**STRIPS** are ideally combined with LITE-**NET** vegetation nets.
