

LITE-SOIL

All in ONE: Air-Soil-Water

Tender text trees

TECHNICAL CHARACTERISTICS

The products are made of long-time proven nonwovens, which are optimized for any type of soil. Up to 90% of the volume consists of interconnected air pores, which can store water and redistribute it by capillary action. All the water is thus immediately available to plants. The products are available in 3 different materials:

		weight	thickness
BIO1	WOOD FIBER (100% cellulose fibers) 100% biodegradable after about 1-2 years	330 g/m ²	4 mm
		600 g/m ²	6 mm
BIO5	PLA (70% PLA + 30% cellulose fibers) 100% biodegradable/compostable after approx. 5-10 years	500 g/m ²	6 mm
PP	PP (100% polypropylene fibers) durable, reusable and sustainable	600 g/m ²	6 mm
		900 g/m ²	8 mm

Trees:

Tender text LITE-NET, LITE-STRIPS, underground irrigation with BLUELITE-RING and construction site protection for trees

1. LITE-NET (vegetation net, distribution net, rolls):

1.1 LITE-NET tree: Pre-assembled vegetation and distribution nets for tree new plantings in 2 sizes and 3 materials;

Water-conducting and -storing nonwoven nets for wrapping around root balls and/or for horizontal laying under the root ball.

The LITE-NET tree quickly absorbs water on the surface and also bring smaller quantities (from short rainfall events or drip irrigation bags) to the deeper roots. There it is stored in the nonwoven net and in the surrounding soil and can be and is 100% available to the roots when needed. When the water is withdrawn from the net, air is sucked in from the surface.
